Digital technology has changed the landscape of every industry, altering manual tasks and independent processes into integrated, streamlined work flows. Dentistry is no longer on the side lines of this revolution, but adopting technical advances from diagnosis to the final restoration.

CAD / CAM in dentistry has been particularly useful in enabling the fabrication of custom, patient-specific restorations and prosthetics without the need for traditional analog dental laboratory methods. While the optimal use of CAD / CAM technology must be determined on a case-by-case basis, it is important for clinicians to recognize the opportunity to utilize computerized technology in patient therapy to provide more highly efficient, accurate, and potentially ideal outcomes.

It is important to learn these competencies in ensuring the competent application of the digital technology.

This 3 day introductory program is envisaged for the beginner as well as practitioners to get a overview of the concepts of digital dentistry understand the different gadgets and the capabilities of digital driven restorative dentistry.
